HTML/CSS Test

Overview

Hi, If you are seeing this you have successfully reached the stage where we are super interested to get you onboard our team but we aren't really sure how you would handle a real task brief and what kind of output you would give.

So here is how it goes, below is a REAL brief, go through it, if you have questions, ask them right away, you cannot ask questions later once you have begun working on the project.

What needs to be done?

Convert the design into an HTML/CSS landing page.
Design Link: https://xd.adobe.com/view/36c7d3d6-c626-4cf5-bc7c-617bc1880f02-6394/

What else?

Your output has to be exactly like the design. Make sure you pay attention to details in terms of sizing, fonts, spacing, images. The landing page has to be responsive. Bonus points, if you can use scss or tailwind CSS.

How should I submit my test?

You can upload it on GitHub and connect it with GitHub.io and share the final link.
